RESISTING HACKERS ATTACK ON COMPUTERS, WEBSITES AND NETWORKS.

Written by

IT TECHNICAL SUPPORT UNIT OF COMPUTRONIX TECHNOLOGIES.

26th MAY, 2020

An advertisement for Computronix Technologies' cyber security services. The background is dark blue with a grid of light blue dots. On the left, there are yellow diagonal banners with the text 'CYBER CRIME CYBER CRIME' and 'CYBER CRIME CYBER CRIME'. Above and below these banners are the phrases 'PROTECT OFFICE WORKERS!' and 'PROTECT REMOTE WORKERS!' in yellow. At the top, it says 'COMPUTRONIX TECHNOLOGIES OFFERS EFFECTIVE PROTECTION AGAINST HACKING & SPAMMING.' On the right, there is white text: 'We have the Skills, Tools & Technologies To Resist & Subdue Any Cyber Criminal from Hacking Down:'. Below this are the hashtags '#COMPUTERS', '#NETWORKS', and '#WEBSITES'. Further down, it says '"WE SCAN, DETECT & REMOVE ANY MALICIOUS HACKING & SPAMMING TOOLS FROM COMPUTING DEVICES"'. At the bottom, it says 'CALL US NOW ON: +2348139617210' and 'ON FACEBOOK, LINKEDIN & TWITTER: @ComputronixT'.

OVERVIEW: Withstanding the attack of Hackers, Scammers and Spammers is our professional expertise. It is part of the IT Technical Support services we provides to individuals, businesses, companies, organisations and government from Computronix Technologies. It is our primary responsibilities to protect computers, websites and networks for clients to prevent hacking and spamming activities from internet criminals.

INTERNET SECURITY

The threat of cybercrime is alarming these days. The financial losses incurred from such attacks are tremendous. The world of business is losing billions of dollars to internet crimes each year. Although, internet has changed the way we live, work and does business, it is not without its problems of insecurity and vulnerability to threats by internet criminals. Our IT support service will keep businesses and homes completely protected against internet threats. Computronix Technologies has the latest technologies in curbing cybercriminals' threat to computing hardware and software. We will give individuals, businesses, companies, organisations and government the complete protection their homes, businesses and administrations deserve. Apart from giving businesses protection from the internet, we shall be giving network security that will secure computer networks. It has now become imperative for individuals, businesses, companies, organisations and government to start taking internet security seriously; there is a need to join us; as we strive to protect computing devices and networks from internet criminals. Computronix Technologies' internet security experts monitor and review the threat on a daily basis in order to catch up with the criminals' advances and subdue their threats. So, we are informed with the latest threats. Our experts will be giving individuals, businesses, companies, organisations and governments' total protection over any business transactions or administration carried out over the internet. Computronix Technologies' security guarding will cover browser security, security of data entered on a web form, authentication and safeguarding of data sent through internet protocol (IP). We will ensure that clients' data are encrypted, using various forms of encryption such as Pretty Good Privacy (PGP). Securing customers' business web setup will also include the use of firewalls to shield unauthorized traffic, anti-malware, anti-spyware, anti-spam and phishing, and anti-virus programs that will monitor internet traffic for dangerous attachments by operating from particular networks or devices. The latest viruses, Trojan horses, spyware, malware and worms shall be tackled severely. Customers' wired and wireless networks will also be fully protected. Computronix Technologies will establish rules and measures for individuals, businesses, companies, organisations and government that will guard against attacks over the internet.

RESISTING HACKERS ATTACK ON WEBSITES BUILT WITH WORDPRESS AND OTHER TYPES OF WEBSITE TECHNOLOGIES.

A fellow named Gall, who has been working with renowned internet Security Company reported on the 5th day of May 2020 that Cyber Criminal Group launched malicious attacks across over 24,000 distinct IP address with the sole aim of wanting to hack into more than 900,000 WordPress sites. The report stated that the maximum attack happened on 3rd day of May, 2020; during which the criminal gang launched over 20 million hacking attempts against 500,000 domains. The gang achieved this with exploitation of cross-site scripting (XSS) vulnerabilities to plant malicious JavaScript code on websites with the aim of wanting to re-direct incoming traffic to malicious websites of their choice. It is a very malicious attack that must be condemned by every transparent person or group. It is very capable of causing devastating effects and damages to businesses of all sizes across the world. The malicious attack will put financial transactions across the internet under serious threat; that could result in heavy financial losses which has the propensity of winding up businesses; especially SMEs with struggling financial positions in marketplaces across the world. It has become very important for us to share this information in order to protect businesses around the world and across Nigeria from malicious attack from Hackers on their websites; especially when you consider the fact that as at the year 2020, over 35% of websites around the world are powered by WordPress; which even includes Blue Chip companies. Therefore, what effort is your business, company or organisation doing to remain protected? Do not fold your hands and watch your business and finances go under attack by Cybercriminals. WordPress website owners should contact Computronix Technologies without further delay for adequate diagnosis, solutions, tools, technologies, and technical support to block such malicious attack from Hackers or recover any of their website that is already under attack from Hackers that may be holding website owners to ransom. It is time to agree with Computronix Technologies that your website design and development project MUST be executed by IT Company that knows what it takes to protect the data of website owners and that of their customers. The experience of Computronix Technologies in building highly secured and sophisticated websites that have the capabilities of withstanding any malicious attack from Hackers operating in the underworld is very necessary when choosing your website Developer. Computronix Technologies will never get it wrong in any dimension. Make us your best choice in website design because we have the skills,

tools, experience, technologies and technical support you need for your website project. Computronix Technologies has watched with dismay the lowly protected and unprotected websites of businesses in Nigeria and around the world today. The Hackers are getting more sophisticated every day. The internet security experts of Computronix Technologies are not sleeping and will never get fatigued in making sure that businesses in Nigeria and around the world are protected. Do not wait until it happens, businesses MUST take decisive action today to protect their websites and other IT infrastructures; which includes computers and networks. Therefore, the protection Computronix Technologies offers is not limited to website protection alone. It is very sad to note that many websites in Nigeria today that have been processing financial transactions and data lack the necessary protection needed in 21st century web design and development, web portal development, web application development, domain name registration and domain name hosting. All these are very necessary in building up a robust, resilient and highly protected websites, web applications and web portals. We can never get it wrong. We encourage prospective customers that have not known much about us to go through our "history" on "about us" page on our website to thoroughly understand when Computronix Technologies started building websites, fixing servers, desktops, laptops; planning, designing, installing and configuring networks. We have these experiences on these aspects of IT services since 1994; having passed through various technological developments on these areas of IT over the years-to-date. We are the ONE STOP name in every household and businesses anyone can trust in IT security. Do not be afraid of the project cost for your IT security because the benefits can be very rewarding and will out-weigh the project cost. It is only when you get protection from Computronix Technologies against huge financial loss and privacy violation that you will understand the essence of engaging an IT Company with a holistic approach in IT security. Individuals, businesses, companies and organisations will gain a whole lot in using our IT security for protection of their IT infrastructures such as websites, computers and networks. Do not settle down with low skilled and inexperienced IT persons or IT service Providers for your websites, computers and networks. Low skilled IT persons and their companies will expose you and your business to high risks against Hackers, Scammers and Spammers. Computronix Technologies is the trusted name for proper protection of all websites, computers and networks. Do not compromise quality IT service delivery. Do not settle down with inferior IT service Provider. Computronix Technologies is the best choice you will be making in your business history for that adequate and trusted protection in keeping Hackers away

from your websites, networks and computers. Remember, Hackers and Spammers have no business policing and monitoring your business activities and social lives without your knowledge; waiting for the proper time to strike you down emotionally or ruin your finances; causing deep depression and mental illness to their victims. You must take decisive action today against Hackers and Spammers. They are no friends. Declare war on Hackers and Spammers. Computronix Technologies will be the army you need to fight against hacking and spamming on your websites, computers and networks. Do not be deceived with advice by inexperienced Website Developers, Computer repairs and maintenance Technicians and Network Technologists working on your IT systems that they have the skills and tools to protect your websites, computers and networks. You will waste your money on them, and end up achieving nothing, but endangering your websites, networks and computers the more to hacking and spamming. Antivirus software and firewall cannot protect your computers, websites and networks. Hackers and Spammers have developed more sophisticated weapons that can subdue even the best antivirus software in the IT industry nowadays. All round protection is what Computronix Technologies gives to customers. Do not miss out on this. All your remote workers and staffs working from their homes, project sites and marketplaces homes and assessing all the servers and databases in your corporate office will be adequately protected with adoption and integration of Computronix Technologies IT security services into your scheme of work. Think about Computronix Technologies whenever you are thinking about developing websites, repairing and maintaining computers and configuring networks because of the adequate security features we can into IT infrastructures. Think wisely and select wisely. This brings us to the overwhelming question on how protected are your computers, websites, and networks?

HOW PROTECTED ARE YOUR COMPUTERS, WEBSITES AND NETWORKS?
